issgc15	>	134.59.140.158	/home/user/issgc15/	issgc35	>	134.59.140.165	/home/user/issgc35/
issgc16	>	134.59.140.159	/home/user/issgc16/	issgc36	>	134.59.140.165	/home/user/issgc36/
issgc17	>	134.59.140.159	/home/user/issgc17/	issgc37	>	134.59.140.166	/home/user/issgc37/
issgc18	>	134.59.140.159	/home/user/issgc18/	issgc38	>	134.59.140.166	/home/user/issgc38/
issgc19	>	134.59.140.160	/home/user/issgc19/	issgc39	>	134.59.140.166	/home/user/issgc39/
issgc20	>	134.59.140.160	/home/user/issgc20/	issgc40	>	134.59.140.167	/home/user/issgc40/

```
source /opt/saga-1.3.1-issgc/share/saga/saga-env.sh
```

Make sure everything works:

```
saga-job run ssh://user@issgc-client-XX /bin/hostname  
saga-job run ssh://issgcXX@issgc-ui /bin/hostname
```

```
saga-advert list_directory advert://issgc-ui//issgcXX/ ?
```

- SAGA comes with simple command line tools that allow to access basic package functionality.
- The source code is very simple and a great starting point to explore the SAGA package APIs:
  - saga-advert <http://issgc-server-01.polytech.unice.fr/saga/cltools/advert/>
  - saga-file <http://issgc-server-01.polytech.unice.fr/saga/cltools/file/>
  - saga-job <http://issgc-server-01.polytech.unice.fr/saga/cltools/job/>
  - saga-replica <http://issgc-server-01.polytech.unice.fr/saga/cltools/replica/>

- API documentation
  - <http://issgc-server-01.polytech.unice.fr/saga/apidoc/>
- Programming manual
  - <http://issgc-server-01.polytech.unice.fr/saga/manual.pdf>

- Simple file copy example: copy.cpp

```
#include <saga/saga.hpp>

int main(int argc, char * argv[])
{
    saga::url source("ssh://issgc12@issgc-ui/etc/passwd");
    saga::url target(".");
    saga::filesystem::file file (source, saga::filesystem::Read);
    file.copy(target);

    return 0;
}
```

- Simple file copy example: Makefile

```
SAGA_SRC = $(wildcard *.cpp)
SAGA_ADD_BIN_OBJ = $(SAGA_SRC:%.cpp=%.o)
SAGA_BIN = copy

include $(SAGA_LOCATION)/share/saga/make/saga.application.mk
```

- Or do it the hard way:

```
g++ -Wall -I/opt/saga-1.3.1-issgc/include -pthread \
-L/opt/saga-1.3.1-issgc/lib \
-lsaga_engine -lsaga_package_file example.cpp
```

- Make sure that the SAGA libraries can be found by the loader. saga-env.sh takes care about that.
- If something goes wrong - use SAGA\_VERBOSE:

```
SAGA_VERBOSE=10 ./example
```

- The source code can be found here:
  - [http://issgc-server-01.polytech.unice.fr/saga/examples/hello\\_world.cpp](http://issgc-server-01.polytech.unice.fr/saga/examples/hello_world.cpp)
- Change these lines:

```
#define HOST1 "ssh://issgc<ID>@issgc-ui.polytech.unice.fr"  
#define HOST2 "ssh://issgc<ID>@issgc-ui.polytech.unice.fr"  
#define HOST3 "ssh://issgc<ID>@issgc-ui.polytech.unice.fr"
```

- The source code can be found here:
  - [http://issgc-server-01.polytech.unice.fr/saga/examples/depending\\_jobs.cpp](http://issgc-server-01.polytech.unice.fr/saga/examples/depending_jobs.cpp)
- Change this line:

```
#define RESULT_STORE "advert://issgc-ui//issgcXX/dep_job_result"
```

- Make sure the advert entry is empty

```
saga-advert remove_entry advert://issgc-ui//issgcXX/dep_job_result
```

- Copy executable

```
scp depending-jobs issgc-client-XX:/tmp/saga/
```

- Run the example:

```
./depending-jobs ssh://user@issgc-client-XX ssh://issgcXX@issgc-client-XX
```

- Retrieve result from the advert service

```
saga-advert retrieve_entry advert://issgc-ui//issgcXX/result_ex_2
```

- We saw simple examples from three different API packages:
  - advert package
  - job package
  - file package
- All the example code was rather simple, but of course it can be used to develop applications of arbitrary complexity
- More packages available:
  - replica, service discovery, cpr, streams
